

# GET MORE HOT WATER FOR LESS.

Heat pump water heaters move heat instead of generating it, so they use up to 70% less energy than standard electric water heaters. Meaning lower bills for you and more hot water for your busy household, all year long.

# KEEP WARMTH IN AND COLD OUT.

Add insulation now for year-round comfort and lower energy bills.

Upgrading attic or wall insulation can significantly reduce your heating and cooling needs. It's one of the most cost-effective ways to improve comfort.

# OPEN TO SAVINGS. CLOSED TO DRAFTS.

Old windows can be a major source of heat loss. Upgrading to energy-efficient windows helps keep your home more comfortable while your energy bills lower throughout the year. They also enhance curb appeal and long-term energy savings.

# SEAL IN COMFORT.

Poorly insulated doors can waste energy and make your home uncomfortable.

Upgrading to an energy-efficient exterior door helps reduce heat loss, block outdoor noise, and improve year-round comfort. Replacing older doors can also reduce condensation and drafts. It's a small change that makes a big difference.

# SPIN SAVINGS YOUR WAY.

Being smart about your ceiling fans can give your HVAC system a break without sacrificing comfort. Just make sure your fans are running clockwise in winter to circulate warm air and counterclockwise in summer for cooling.

Your energy bill will thank you.

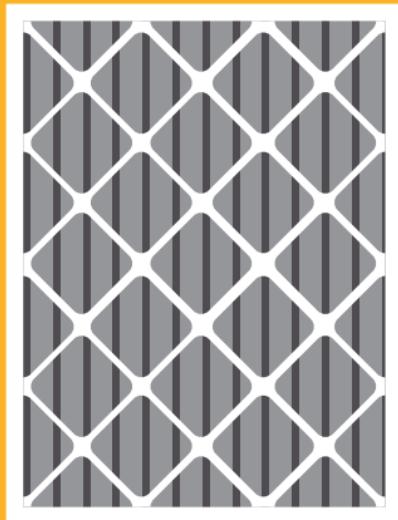

# WINTER'S GOT NOTHING ON YOU. OR YOUR PIPES.

Insulate pipes, seal air cracks, and clean your filters before temperatures drop. These simple steps help protect your home from burst pipes and unnecessary energy waste. A little prep goes a long way when the cold hits.
